SOLENOID VALVE EV06-2A

DESCRIPTION

A solenoid-operated, 2-way, piloted, poppet-type, normally open, screw-in, hydraulic cartridge valve designed for low leakage in load-holding applications.

PLOTED LOGIC VALVE PLV10-SA

DESCRIPTION

A spool-type, screw-in, cartridge-style, hydraulic directional element, with multi function potential when used with other directional, pressure, or flow control devices.

OPERATION

The PLV10-SA is a spring-biased poppet valve which will block 1 to 2 or 2 to 1 until pressure at 1 or 2 exceeds the cumulative pressure at 3 and bias spring. With no pressure at 3, flow will be allowed from 1 to 2 or 2 to 1 once the bias spring force is overcome with pressure at 1 or 2. When the element is in closed state, the ratio of areas 1 and 2 is 1:1, and the ratio of areas 1 or 2 to 3 is 1:2.

MANUAL SPRING RETURN VALVE MV08-2B

DESCRIPTION

A manual, 2-way, pull-to-open, screw-in hydraulic directional valve.

OPERATION

The MP08-2B blocks flow from 2 to 1 until an operator pulls the shaft outward.

Note: Pressure at port 1 will directly act on the spool and spring. Port 1 is intended to be a tank port only.

The bias spring allows for up to 12.4 bar back-pressure at 1 before the valve will open.

RATINGS

Operating Pressure:

Port 2: 250 bar

Port 1: 14 bar max.

Flow: See Performance Chart

Internal Leakage 2 to 1: 0.25 cc/minute max. at 250 bar

Mechanical Pull Effort Required at Rated Pressure: 4.5 kg. initial; 7kg full shift

Temperature: -40 to 120°C

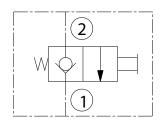

Filtration: Recommend 25 μm nominal or better

Fluids: Mineral-based or synthetics with lubricating properties at viscosities of 7.4 to

PRESSURE REDUCING VALVE PRV10-3A

DESCRIPTION

A screw-in, cartridge-style, direct-acting, spool-type, hydraulic pressure reducing/ relieving valve with internal pilot and internal spring chamber drain, designed to act as a pressure-regulating device.

OPERATION

In its steady state, the PRV10-3A allows flow to pass bidirectionally from 2 to 1, with the spring chamber constantly drained at 3.

On attainment of a pre-determined pressure at 1, the cartridge shifts to restrict input flow at 2, thereby regulating pressure at 1. In this mode, the valve will also relieve 1 to 3 at approximately 10 bar over the reducing setting.

RATINGS

Operating Pressure: 210 bar Flow: See Performance Chart

Internal Leakage 2 to 3: 80 cc/minute max. at 210 bar Standard Spring Ranges (Reducing Function):

10 to 30 bar 15 to 60 bar 25 to 100 bar 40 to 140 bar

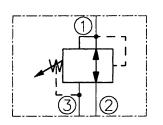

Temperature: -20 to 90°C with standard Buna seals Filtration: Recommend 25 μ m nominal or better
